Self-taught web developer focused on modern web technologies

Projects

LangBuddy

- WebApp built using **Next.js**, **Typescript**, **Redux**, **PostgreSQL**, **Tailwindcss** and **Pusher**.
- A platform for connecting language learners worldwide. LangBuddy helps users find language exchange partners, practice with native speakers, and engage in real conversations.
- promotes cultural exchange and natural learning through features like a chat system, language matching, and user profiles.

Mutarjem (Translator)

- A desktop application built using **Tauri**, **TypeScript**, and **React**.
- Purpose: Serves as an interface for an AI-integrated backend to assist translators in translating multi-purpose text.
- Functionality: Utilizes third-party resources to pull suggested translations, enhancing accuracy and reliability, especially in cases where the translator cannot be fully trusted to perform the translation independently.
